

Virtual Team Tools

Team glue

The #1 tool for bringing all the other tools together is Slack. Channel-focused, it gives more flexibility in how it is used than the alternatives. And it is more fun to use!

Project management

There's a lot of project management tools available, but Trello was the first major offering to be geared for virtual team use. It's more visual than the other top options.

Security

For securely sharing access to a variety of online tools, Bitwarden Enterprise just about tops the rest. And, at the time of writing, it has never been hacked!

Meeting

There's no obvious top option here. Microsoft Teams, WebEx, Zoom and GoToMeeting are all excellent. Virtual meetings have never been technologically easier to run.

Document

Tracking various approval levels is harder for remote teams. HelloSign makes it easy to send, sign and track all documents across the levels required.
